

AMENDMENTS TO THE CLAIMS

1. (Original) A system for viewing multimedia content, the system comprising:
 - a communication network;
 - a content source coupled to the communication network;
 - a broadcast center coupled to the communication network; and
 - a plurality of client systems coupled to the broadcast center, wherein the plurality of client systems is associated with a household, the plurality of client systems being logical extensions of each other.
2. (Canceled)
3. (Currently amended) The system of claim 1, wherein [a] ~~the household of the plurality of households~~ is configurable to be associated with a plurality of user objects.
4. (Original) The system of claim 3, wherein a client system of the plurality of client systems is configured to be selectively accessed by a user to change a configuration of a user object of the plurality of user objects, the system being configured to provide the change to all of the client systems of the plurality of client systems without further activity from the user.
5. (Original) The system of claim 3, wherein the system is configurable to selectively add a new client system to the plurality of client systems, the system being configured to provide the plurality of user objects to the new client system without activity from a user.
6. (Original) The system of claim 3, wherein a user object of the plurality of user objects can be concurrently active in more than one client system of the plurality of client systems.
7. (Original) The system of claim 3, wherein the plurality of user objects includes an anonymous user object, wherein the anonymous user object is configured to be accessible to all users.

8. (Original) The system of claim 3, further comprising a server operatively coupled to the plurality of client systems, wherein the server is configured to include information related to each user object of the plurality of user objects.

9. (Original) The system of claim 8, wherein the server is configured to include a revision history, the revision history being configurable to include information related to configuration changes of the plurality of user objects.

10. (Original) The system of claim 9, wherein the revision history includes a ticket number associated with each configuration change that is included in the revision history.

11. (Original) A system for viewing multimedia content, the system comprising:
source means for providing multimedia content;
distribution means for distributing multimedia content from the source means;
network means for supporting communication between the source means and the distribution means; and

a plurality of access means, coupled to the distribution means, for selectively providing access to the multimedia content, wherein the plurality of access means is associated with a household, the plurality of access means being logical extensions of each other.

12. (Canceled)

13. (Currently amended) The system of claim 11, wherein [a] the household of the plurality of households is configurable to be associated with a plurality of user objects.

14. (Original) The system of claim 13, wherein an access means of the plurality of access means is configured to be selectively accessed by a user to change a configuration of a user object of the plurality of user objects, the system being configured to provide the change to all of the access means of the plurality of access means without further activity from the user.

15. (Original) The system of claim 13, wherein the system is configurable to selectively add a new access means to the plurality of access means, the system being configured to provide the plurality of user objects to the new access means without activity from a user.

16. (Original) The system of claim 13, wherein a user object of the plurality of user objects can be concurrently active in more than one access means of the plurality of access means.

17. (Original) The system of claim 13, wherein the plurality of user objects includes an anonymous user object, wherein the anonymous user object is configured to be accessible to all users.

18. (Original) The system of claim 13, further comprising a server operatively coupled to the plurality of access means, wherein the server is configured to include information related to each user object of the plurality of user objects.

19. (Original) The system of claim 18, wherein the server is configured to include a revision history, the revision history being configurable to include information related to configuration changes of the plurality of user objects.

20. (Original) The system of claim 19, wherein the revision history includes a ticket number associated with each configuration change that is included in the revision history.

21. (New) A method for viewing content delivered to a client system, the method comprising:

associating a plurality of client systems with a household;
organizing the plurality of clients systems associated with the household into logical extensions of each other; and

delivering content from a content source via a communication network to at least one of the plurality of clients systems in accordance with the organization into logical extensions.

22. (New) The method of claim 21, wherein organizing the plurality of client systems associated with the household into logical extensions of each other includes:

associating a plurality of user objects with the household, each user object containing information related to a user in the household; and

providing the plurality of user objects to all of the client systems of the plurality of client systems associated with the household.
